Histopathology small

Clinical Information: Cough. CT shows enlarging mediastinal nodes. D/D sarcoidosis, tuberculosis or lymphoma

Gross Description: The specimen is received in formalin coded as "Mediastinal lymph node". It consists of a single light yellow to tan brown lymph node measuring 2 x 1.2 x 0.7 cm. Cut surface is light yellow to greyish. Bisected, entirely submitted in 2 cassettes (MB).

Microscopic Description: Sections examined reveal lymph node with effaced architecture. There are scattered discrete granulomata composed of collections of epithelioid histiocytes with multinucleated giant cells. No necrosis is seen. No surrounding rim of lymphoplasmacytic infiltrate is seen. Intervening large areas of hyalinization is noted.

Diagnosis: Mediastinal lymph node:
Chronic granulomatous inflammation.

Note:
- Differential diagnosis includes; Sarcoidosis and Tuberculosis in order of preference.
- Clinical and microbiological culture correlation is recommended.

Notes: Electronically verified report, signatures not required. Identity of the patient not verified. Any query about this report may be addressed within twenty four hours of reporting, the duration for which the samples are preserved.
