

**PATHOLOGY DEPARTMENT**

Reception ID: 14-001-0000045

PR No: 14-04-000004

Entered: (17, Apr 14. 18:44)

Patient Name: Mr. babr jut (M : 44 Year(s))

Printed: 29, Apr, 14. 16:10

Referred By: External Clinic

***PCR HCV (qualitative) Real-Time***

Hepatitis C Virus RNA

Detected

HCV RNA test is based on Real-time PCR using reverse transcription and detection by using fluorescent reporter dye probe specific for HCV in Mini Opticon-BIO-RAD. 1. A single negative HCV RNA test does not rule out HCV infection. The test may be repeated once in 6 months to exclude intermittent/variable viremia. 2. HCV RNA test results performed by different laboratories must not be compared due to differences in sensitivity/specificity of the method used. As a number of factors such as the time of centrifugation, storage, transportation, temperature, collection tubes and lab-testing may affect HCV RNA quantity.

Notes: Electronically verified report, signatures not required. Identity of the patient not verified. Any query about this report may be addressed within twenty four hours of reporting, the duration for which the samples are preserved.

***PCR HBV (qualitative) Real-Time***

Hepatitis B virus DNA

Not detected

HBV DNA test is based on COBAS Ampliprep/Cobas Taqman System 1. Presence of HBV DNA is a marker for viral replication. 2. Determination of HBV DNA levels plays an important role in pretreatment evaluation, monitoring of antiviral therapy, detection of relapses after treatment.

Notes: Electronically verified report, signatures not required. Identity of the patient not verified. Any query about this report may be addressed within twenty four hours of reporting, the duration for which the samples are preserved.
